Enhanced robustness and EMI resistance achieved by the laser-welded double-sided metal shell (SDHC card compatible, with card jump-out and wrong insertion prevention functions)

SOCKETS FOR SD MEMORY CARD (R TYPE)

Standard type

Reverse type

Compliance with RoHS Directive

FEATURES

1. Superior EMI resistance and terminal coplanarity achieved by the double-sided metal shell

The laser-welded double-sided shell has high robustness and shielding performance. Providing a ground pattern when mounting the socket is effective for EMI protection.

The high resistance to reflow heat prevents the reflow process from degrading the terminal coplanarity.

2. The structures of the card detection and write protection switches prevent the card thickness from affecting the detection accuracy.

The side detection system and the highly dust-resistant V notch contact structure ensure high contact reliability.

3. Equipped with the card jump-out prevention function existence

4. Card locking structure for forced ejection protection

The lock pin in the metal shell prevents unwanted ejection of the card.

5. Compatible with the SDIO standard (with ground tab)

Compatible with the SDIO standard, allowing use for expansion modules with an interface function

APPLICATIONS

• DSCs, DVCs, PDAs, handheld terminals, notebook PCs, gaming consoles, car navigation systems, portable audio devices, etc. that use an SD card

• What is V notch construction?

By making contact with the edges and thus increasing the contact pressure, this product can eliminate foreign matters more effectively than conventional products.

[Cross Section of Contacts]

ORDERING INFORMATION

AXA **2** **R** **3** **1**

2R: Sockets for SD memory card (R type)

<Board mounting direction>

6: On board mounting reverse type (outside terminal)

7: On board mounting standard type (outside terminal)

<Eject type>

3: Push-push type

<Standoff height>

0: Without standoff

3: Stand off 1.5 mm

<Function>

2: Without card jump-out prevention function, with card detection switch and with write protect switch

6: With card jump-out prevention function, with card detection switch and with write protect switch

<Terminal/Positioning boss>

1: SMD terminal/With positioning boss

<Packing>

T: 35 pcs. tray package × 20 trays

P: 350 pcs. embossed tape and paper reel package × 2 reels

PRODUCT TYPES

Product name	Eject type	Card detection switch	Card jump-out prevention function	Mounting type	Standoff height (mm)	Part No.	Packing quantity

SPECIFICATIONS

1. Characteristics

Item		Specifications	Condition
Electrical characteristics	Rated Current	0.5 A/1 terminal	
	Contact resistance	Signal contact portion: Max. 100mΩ (Initial) Detection contact portion: Max. 150mΩ (Initial) (Card detection and write protection detection)	Measured based on the HP4338B measurement method of JIS C5402
	Insulation resistance	Min. 1,000MΩ (Initial)	Using 500V DC megger (applied for 1 min.)
	Breakdown voltage	500V AC for 1 min.	Rated voltage is applied for one minute and check for short circuit or damage with a detection current of 1 mA.
Mechanical characteristics	Vibration resistance	Frequency: 10 to 55 Hz Acceleration: 20.0 m/s ² {2.0G} No current interruption for more than 0.1 μs	
	Card insertion force	Max. 40N	
	Card removal force	Min. 1N, Max. 40N	
Lifetime characteristics	Insertion and removal life of card	Insertion and removal life: 10,000 times Contact resistance after testing: Signal contact portion: Max. 100mΩ Detection contact portion: Max. 150mΩ (Card detection and write protection detection)	Insertion and removal speed are at a rate of 600 times/hour or less.
Environmental characteristics	Ambient temperature	−25°C to +90°C	No freezing or condensation in low temperatures
	Storage temperature	−40°C to +90°C (The allowable storage temperature is −40°C to +50°C if unopened from original packaging)	No freezing or condensation in low temperatures
	Resistance to soldering heat	Reflow soldering: peak temperature 250°C or less Hand soldering: Soldering iron temperature 300°C, 5 sec. or less	Sockets (shell) surface temperature for using infrared reflow soldering machine
	Humidity tolerance (mated condition)	Contact resistance: Signal contact portion: Max. 100mΩ Detection contact portion: Max. 150mΩ (Card detection and write protection detection) Insulation resistance: Min. 100 MΩ	MIL-STD-1344A, METHOD 1002 Temperature: 40±2°C, Humidity: 90 to 95%RH, Test time: 500 hours
Applicable memory card		SD memory card*1	
Unit weight		2.9g	

Note: *1. The above characteristics cannot be guaranteed when a card other than the specified ones is used.

2. Material and surface treatment

Portion	Material	Surface
Signal contact	Copper alloy	Contact portion: Ni plating on base, PdNi plating + Au flash plating Soldering portion: Ni plating on base, Au plating on surface
Detection contact		Contact/Soldering portion: Ni plating on base, Au plating on surface
Retention solder tab	Stainless steel	Soldering portion: Ni strike, Partial Au plating

AXA2R73061*

(With card jump-out prevention function)

AXA2R73021*

(Without card jump-out prevention function)

Circuit schematic

Technical drawing of the front view of the SD memory card reader. The drawing shows a rectangular device with a central slot for the card. Dimensions are indicated: a width of 24.00, a height of 35.10 (Set condition), and a height of 6.00 (Eject stroke). A note indicates the SD memory card is inserted into the slot.

Figure 1 is a detailed cross-sectional drawing of the PCB assembly. It shows the internal structure of the PCB, including the substrate, core, prepreg, and various layers. The drawing includes numerous dimensions for the different layers and components. Key dimensions include: overall width 30.30±0.05, overall height 3.30, and various internal layer thicknesses and widths. The drawing also indicates the use of pattern insulation (cross-hatch) and pattern forbidden area (diagonal lines). Labels include 'PC board both side', 'Socket edge', 'Substrate edge', and 'Through hole'.

Card attachment condition	Write protect switch		Card detection switch
	Write unable	Write enable	
Card not attached	Open	Open	Open
Card attached	Open	Closed	Closed
Terminal number	①—②		①—③

*1 Standoff dimension is the dimension that takes into account the solder resist or silk screen printing thickness on the PC board in order to preserve the dimension from the surface of the PC board to the bottom of the socket.

*2 This is the pattern forbidden area. It is provided to prevent the signal contact tips from contacting the substrate surface.

Recommended metal mask pattern

Metal mask thickness: 120 μ m

(Without card jump-out prevention function)

A 3D perspective view of a grey, rectangular printed circuit board (PCB). The board features several electronic components, including a large black integrated circuit (IC) in the center, smaller surface-mount components, and a multi-pin connector on the right side. The board is shown from an isometric perspective, highlighting its thickness and the arrangement of components.

Technical drawing of the SD memory card reader showing dimensions. The width is 24.00. The height is divided into three sections: (0.80) (Push stroke), (6.00) (Eject stroke), and (35.10) (Set condition).

Technical drawing of a PCB layout for a 16-pin connector. The drawing shows a top view of the PCB with dimensions for the board, pads, and holes. Key dimensions include:

- Overall width: 30.30 ± 0.05
- Overall length: 19.15 ± 0.05
- Pin pitch: 2.50 ± 0.05
- Pin diameter: 1.00 ± 0.05
- Pad diameter: 1.60 ± 0.05
- Through hole diameter: 0.625 ± 0.05
- Substrate edge dimensions: 1.60 ± 0.05 , 1.45 ± 0.05 , 1.60 ± 0.05
- Socket edge dimensions: 1.60 ± 0.05 , 0.60 ± 0.05 , 0.40 ± 0.05
- Through hole dimensions: 0.60 ± 0.05 , 0.40 ± 0.05 , 1.40 ± 0.05 , 1.60 ± 0.05
- PC board both side: 0.60 ± 0.05 , 0.40 ± 0.05 , 1.60 ± 0.05
- Substrate edge: 14.55 ± 0.05
- Through hole: 27.95 ± 0.05

Card attachment condition	Write protect switch		Card detection switch

Metal mask thickness: 120 μ m

EMBOSSED TAPE AND REEL (Unit: mm)

• Tape dimensions

• Reel dimensions (Conforming to JIS C0806-1995)

**NOTES****1.Regarding the design of PC board patterns**

Conduct the recommended foot pattern design, in order to preserve the mechanical strength of terminal solder areas.

2. Regarding the socket mounting

1) When reflow soldering when the slider is locked, heat will cause the slider to deform and not work. Therefore, please confirm that the slider lock is released before mounting if you have inserted and removed a card before soldering.

2) Be aware that during mounting, external forces may be applied to the connector contact surfaces and terminals and cause deformations.

3. Soldering

1) Reflow soldering

(1) Screen-printing method is recommended for cream solder printing.

(2) Use the recommended foot pattern for cream solder printing (screen thickness: 0.12 mm).

(3) The metal mask opening ratio for the COM contact (one) and NO contacts (two) must be 75%.

(4) When applying the different thickness of a screen, please consult us.

(5) The following diagram shows the recommended reflow soldering temperature profile.

The recommended conditions for the reflow temperature profile

(6) Measure the temperature at the connector surface.

(7) If the reverse side of the board undergoes reflow soldering after the socket is reflow-soldered, fix the socket with tape or adhesive; otherwise, the socket may drop. The socket can withstand two iterations of reflow soldering.

2) Hand soldering

• Set the soldering tip to 300°C, and solder for no more than 5 seconds.

• Be aware that for the 0 mm standoff type, solder creeping at the retention solder tab sections may occur if soldering is conducted for long periods or if too much solder is used.

4. Cleaning after soldering

Inside the socket there is a slider section and card detection contact/write protection mechanism. If anything such as flux remains inside after washing, insertion and removal will be hampered and contact will be faulty. Therefore, do not use methods that involve submersion when cleaning. (Partial cleaning of the PC board and soldered terminals is possible.)

5. After PC board mounting

1) Warping of the PC board should be no more than 0.03 mm for the entire connector length.

2) When assembling PC boards or storing them in block assemblies, make sure that undue weight is not exerted on a stacked socket.

3) Be sure not to allow external pressure to act on sockets when assembling PC boards or moving in block assemblies.

6. Handling single components

1) Make sure not to drop or allow parts to fall from work bench

2) Be cautious when handling because excessive force applied to the terminals will cause deformation and loss of terminal coplanarity.

3) Repeated bending of the terminals may break them.

7. Card fitting

1) These products are made for the design of compact and lightweight devices and therefore the molded part is very thin. For this reason, design the device to prevent undue wrenching forces from being applied to the product during use.

2) The sockets are constructed to prevent reverse card insertion. Caution is required because repeated, mistaken reverse insertion may damage the socket and card.

3) When not soldered, be careful not to insert and remove the socket's card. Doing so will cause a decrease in anchoring ability of the molded part and loss of coplanarity.

4) Forcibly removing a fitted card may degrade the card removal prevention lock. To remove a card, be sure to push the card in the insertion direction to release the slider lock before pulling out the card.

5) Please include notes to the following effect in your user manuals.

6) The card ejection protection lock does not work for MMC.

7) The socket does not have a wrong insertion protection structure for MMC. Be careful about the insertion direction.

8) If an MMC is inserted, it is possible that a short circuit between the socket's signal contacts No. 7 and 8 and the MMC's contact No. 7 may be caused.

8. Device design

1) Contact failure may result if dust or dirt enters the contact section. Please take appropriate measures when designing the device to prevent this from happening, for example by adding a cover.

2) To ensure smooth insertion and removal of cards, please design the chassis so that no force is applied to the metal shell on top of the socket. If a force is present that pushes down on the metal shell, the card will be pressed, which might prevent ejection.

3) Please provide a guide or similar to keep the socket from having force applied to it when inserting and removing.

9. Card jump-out prevention function

1) This socket has a card jump-out prevention function that works under defined conditions. However, we strongly recommend that you instruct users to carefully handle the product to avoid accidents due to improper use or product liability risks.

2) The life of the card jump-out prevention function is not guaranteed under the following conditions: (1) while the card is inserted incompletely, (2) while the card is inserted in the wrong direction, and (3) after the card is inserted in the wrong direction

3) In order to prevent card jump-out, resistance has been added that affects card insertion and removal. Therefore, you will feel resistance when inserting and removing the card. This is normal.

10. Others

If you coat the PC board after soldering for insulation and to prevent wear, make sure that the coating does not adhere to the connector.

For other details, please verify with the product specification sheets.
